## Clinical Cases in Obesity Pharmacotherapy

**Sarah Chapelsky<sup>1,2,3</sup>, David Harris<sup>4,5,6</sup>, Marie-Philippe Morin<sup>7,8,9</sup>,  
Thomas Ransom<sup>10,11</sup>**

<sup>1</sup> University of Alberta, Edmonton, AB, <sup>2</sup> Edmonton Adult Bariatric Specialty Clinic, Edmonton, AB, <sup>3</sup> FEMME HOMME Medical, Edmonton, AB, <sup>4</sup> University of British Columbia, Vancouver, BC, <sup>5</sup> Richmond Metabolic and Bariatric Surgery Program, Richmond, BC, <sup>6</sup> LEAF Medical Weight Management Clinic, Ottawa, ON, <sup>7</sup> Laval University, Quebec, QC, <sup>8</sup> Quebec Heart and Lung Institute, Quebec, QC, <sup>9</sup> Quebec Heart and Lung Institute Research Centre, Quebec, QC, <sup>10</sup> Dalhousie University, Halifax, NS, <sup>11</sup> Nova Scotia Health Authority, Halifax, NS

Medications for chronic weight management have the potential to fundamentally alter care for patients living with obesity. Physician experts in obesity medicine from across Canada will discuss real-world patient cases that illustrate how to incorporate medications with other obesity treatments. They will discuss the practical challenges of incorporating medications into patient care, including:

- how to apply clinical trial evidence for obesity medications to individual patients
- how to approach clinical scenarios where evidence is lacking
- how to evaluate the risk-benefit balance of obesity medication use in a specific patient
- how to support multidisciplinary team members who contribute to the care of patients using obesity medications

**Format:** panel discussion

**Target audience:**

- new and experienced prescribers of obesity medications
- non-prescribing healthcare professionals that care for patients living with obesity
